Personal 3D Viewer

Welcome to the future of personal theatres.

Personal 3D Viewer
HMZ-T2 (JE)
Open Price NEW

Just slip it on your head — and adjust it easily to personal wearing comfort for an exceptionally enjoyable watching and listening experience. Spectacular big-screen viewing expands before your eyes as sensational surround sound embraces you. Now, movie magic awaits you anytime and anywhere at home with Sony's new HMZ-T2 Head Mounted Display. Witness striking high-contrast images and ultra-deep black tone with Sony's self-illuminating Organic Light-Emitting Diode (OLED) display panels. Encounter amazing 3D images minus crosstalk interference common to 3D TV, and marvel at the stunning 5.1-channel surround sound realism of Sony's Virtualphones Technology. Moreover, headphone adaptability allows you to choose your favorite headphones for preferred sound and comfort. Discover how Sony AV ingenuity and adjustable HMD wearing comfort revolutionize great home entertainment. Immerse yourself in "personal theatre" excitement — now playing for your eyes and ears only!

OLED

OLED panel adjusts pixel light emissions to zero for true deep black as never before plus stunningly beautiful high-contrast images. High-speed response captures sports action and fast-moving subtitles without blurry afterimages.

Crosstalk-free Dual HD Panel

Sony's Head Mounted Display provides separate panels for the left eye and the right eye, so image interference never occurs. Dual HD Panel delivers clearly defined 3D images without crosstalk that causes blurry images.

45° wide field of view

In general, a 30° viewing angle is recommended for watching television in a home environment. The HMD provides a 45° viewing angle that expands the wearer's field of view, for enjoyment of a new world of stunning 3D images together with easy readability of subtitles at the edge of the screen.

Auto color temperature adjustment

Developed for greater viewing ease, this auto innovative adjustment function gradually lowers color temperature from bluish to reddish tones, making use of the natural progression of "color adaptation" of human eyesight. Users can enjoy viewing with less fatigue during long hours of movie watching.

5.1ch Virtualphones Technology

By positioning sound images outside the listener's head, these headphones produce a natural sound field, as though the sound source is reproduced through a surround system of front and rear loudspeakers.

vpt™

Headphone adaptability and switching

This HMD allows changing to favorite headphones for enjoyment of sound reproduction the user knows and prefers. So, the user's own preferred headphones can be attached in addition to the choice of provided headphones. Both inner-ear-type and conventional overhead-type headphones are supported, and optimal sound settings can be chosen from a menu screen to ensure greater comfort and sound quality.

Specification

Display	
Display Device	OLED Panel x 2
Display Resolution	1280 x 720
Aspect Ratio	16:9
Field of View	45 degree
Virtual Image Size	750 inch in 20m distance
Viewing Settings
